ABSTRACTED-PUB-NO: FR 2748994A

BASIC-ABSTRACT:

The packaging has a blank (2) formed by the main sealing tongues (1) welded to the package to allow collection. The package can be reclosed with a flap (3) on the upper part of the pocket receiving the contraceptive.

After the closure and enclosure of the skin of the pocket and of the blank the adhesive section (4) is attached to the support of the package. The packaging can allow the use of a separate individual section (2) to receive the used contraceptive.

ADVANTAGE - Allows convenient hygienic disposal of used contraceptive.

DOCUMENT-IDENTIFIER: US 4692143 A

TITLE: Unit package containing ready-to-use vaginal contraceptive

Detailed Description Text (6):

Referring now to the drawings, reference numeral 10 denotes generally a vaginal contraceptive sponge enclosed in a sealed packet of foil or other suitable impervious material such as an aluminum-plastic laminate. The sponge 12 is a generally spheroidal open-celled polyurethane mass having approximately 80 to 100 cells per lineal inch. A string 14 is looped diagonally through the sponge 12 and tied taut in a loop 16 for anchoring purposes. The tied loop 16 compresses and gathers a zone of the sponge and distorts its original spheroidal configuration as seen in the drawings. The looped string 14 forms a convenient means for withdrawing the sponge 12 from the vaginal vault after the sponge has served its intended purpose. A knot may be formed at the ends of the looped string 14 to form a second large loop and to assist the user in locating the looped string for withdrawing the sponge 12.
